

Complexity Science and Educational Research Conference

February 3-5, 2008

University of Georgia
Faculty of Engineering

Graduate Student UGA Engineering CSER Fellows Competition

It is my pleasure to announce that the University of Georgia's Faculty of Engineering is funding grants to encourage graduate students to attend this year's conference. The UGA Engineering CSER Fellows grant will provide up to \$500 to assist fellows in traveling to the conference and to pay for registration. The grant will be awarded by paying the registration prior to the conference with the remaining funds being in the form of a check after the conference. Fellows are expected to attend and engage in the entire conference.

Graduate student fellows will be selected by peer-review based on their

- Potential for future contributions to complexity science and educational research,
- Possible future involvement with the complexity science and educational research group, and
- Record of prior achievement.

Please provide an application package that includes a cover letter and CV or resume. Discuss your interest in complexity science and educational research, your potential to contribute to this area, and the amount requested (up to \$500) in the cover letter. These materials (cover letter and CV/resume) are due on January 3rd and will be announced by Friday, January 5th. Please send your application packages to me via email at nkellam@engr.uga.edu.

Please let me know if you have any questions concerning this fellowship opportunity.

With warm regards,

Nadia Kellam
Assistant Professor
